

ADDAGARLA SRI VIDYA SAGAR

Software Engineer

sagaraddagarla@gmail.com — LinkedIn — GitHub — LeetCode — Portfolio

SUMMARY

Computer Science undergraduate with strong problem-solving skills (130+ LeetCode problems) and experience building scalable backend and AI-driven systems. Proficient in designing REST APIs, multi-component architectures, and data-driven applications using Java, Python, Node.js, and PostgreSQL.

SKILLS

Languages: Java, JavaScript, Python, C
Core CS: Data Structures, Algorithms, OOP, Problem Solving
Frameworks: React.js, Node.js, Express.js
Databases: MongoDB, MySQL, PostgreSQL
Tools: Firebase, Supabase, Git, GitHub, Postman, MongoDB Atlas

PROJECTS

CollabGrow – Collaborative Student Project Platform *React.js, Node.js, Express.js, Firebase, Supabase*

- Built a role-based collaboration platform to streamline cross-department project discovery.
- Designed and implemented REST APIs handling project creation, applications, and status tracking with structured request-response flows.
- Integrated Firebase Authentication and secure cloud storage for user management.
- Developed filtered project discovery feed based on tech stack, domain, and roles.
- Modeled relational data using PostgreSQL (Supabase) for scalable user and project management.
- Implemented real-time application status notifications to improve user engagement.

Meta-Learning Academic AI System *AICTE Internship — Python, FastAPI, PyTorch, Scikit-learn, SQLite*

- Designed a multi-intent AI system to route user queries to specialized components for improved accuracy and reliability.
- Implemented semantic intent classification to handle factual, numeric, and explanation-based queries.
- Built retrieval-based and deterministic modules to ensure reliable factual responses and precise computations.
- Integrated a transformer-based model for controlled explanation generation while reducing incorrect outputs.
- Developed rule-based filtering to enforce domain constraints and handle unsafe queries.
- Engineered a feedback pipeline using SQLite to iteratively improve system performance.

Smart Wash – Order Management System *Node.js, Express.js, MongoDB*

- Developed backend system to digitize laundry order processing and workflow management.
- Integrated WhatsApp API automation for confirmations and real-time order updates.
- Improved operational efficiency, supporting business revenue of 4–5 Lakhs/month.

LEADERSHIP & EXPERIENCE

Google Developer Groups (GDG) Campus – Core Member *Sep 2024 – Sep 2025*

- Conducted Git and GitHub workshop for 100+ students covering branching and pull request workflows.
- Mentored hackathon participants on debugging strategies and system design fundamentals.
- Assisted in organizing and mentoring peer learning sessions as part of GDG study initiatives.

EDUCATION

Sagi Rama Krishnam Raju Engineering College, Bhimavaram *Expected Apr 2027*
B.Tech in Computer Science Design **GPA: 9.05**

Bharatiya Vidya Bhavan, Bhimavaram *2021 – 2023*
Senior Secondary (Class XII) **89.3%**

Bharatiya Vidya Bhavan, Bhimavaram *2021*
Secondary Education (Class X) **91.2%**

ACHIEVEMENTS

- Solved 130+ DSA problems on LeetCode across arrays, hashing, strings, two-pointer, sliding window, and search techniques.
- Smart India Hackathon (SIH) 2025 – Two-time participant; advanced to second round for developing a health monitoring platform addressing migrant-driven disease spread.
- Winner, Web Tech Hackathon.
- Completed GenAI Study Jam (GDG).
- Completed Python for Data Science (NPTEL).
